

PELHAM DISTRIBUTION LTD

Network Optimisation Policy — Operations Manual Section 9

9.1 Scope

Pelham operates two regional facility networks: the Hub Network and the Expansion Network. Each network's connectivity — which facilities have a direct servicing route to which others — is depicted in the corresponding network diagram (hub_network.png and expansion_network.png). The diagrams are the authoritative record of connectivity; the facility register lists facilities and costs but does not record routes.

9.2 Hub Network — oversight stations

The Hub Network requires a set of oversight stations chosen from its facilities such that: (a) no two selected oversight stations have a direct route between them, and (b) every facility that is not itself an oversight station has a direct route to at least one oversight station. Operations must determine the minimum number of oversight stations satisfying both conditions, and list one valid selection. In graph terms this is a minimum independent dominating set of the hub network diagram.

9.3 Expansion Network — eligible expansion sites

The Expansion Network requires the largest possible set of facilities that may be developed simultaneously, subject to the rule that no two developed facilities may have a direct route between them (to avoid servicing conflicts). Operations must determine the maximum number of such facilities and list one valid selection. In graph terms this is a maximum independent set of the expansion network diagram.

9.4 Budgeting

Each oversight station carries an annual oversight surcharge of \$12,000 above its operating cost. Each eligible expansion site carries a one-off development allocation of \$25,000. The optimisation report must total these using the counts determined under 9.2 and 9.3 and the operating costs in the facility register.

9.5 Authority

Where any earlier planning estimate disagrees with the counts derived from the current network diagrams under this policy, the diagram-derived counts govern. The network diagrams are definitive.
